

# *Simple Dog*

I've created this model starting with text instructions found on the internet (thought it's from M. kirchenbaum or M. Lafosse). This is a very simple model, but my first one ...

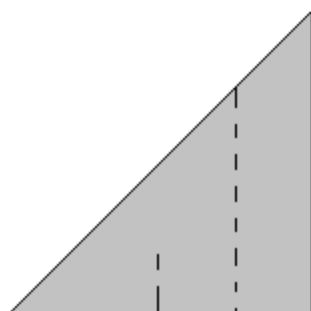

Valley fold

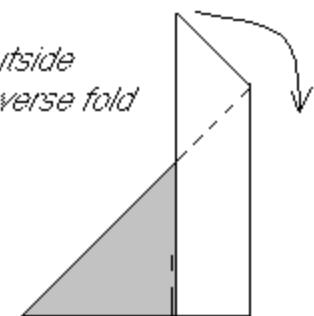

Mark the middle

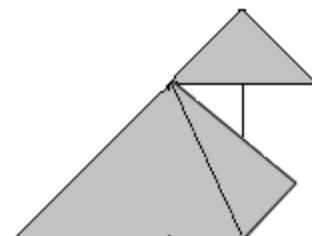

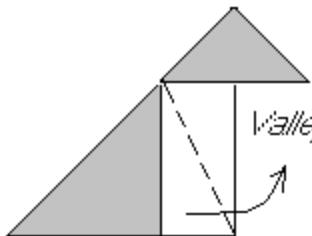

outside reverse fold

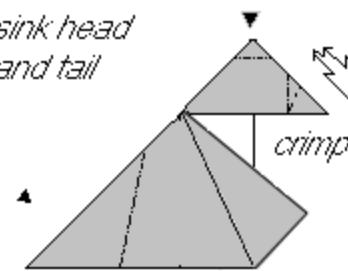

outside  
reverse  
fold

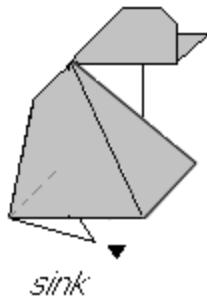

Valley fold

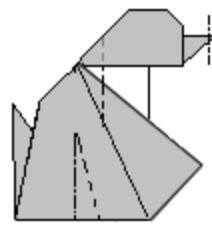

sink head  
and tail

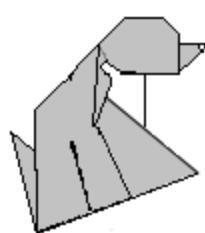

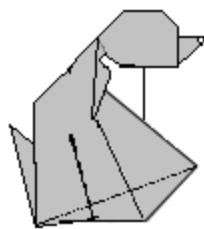

crimp fold

sink

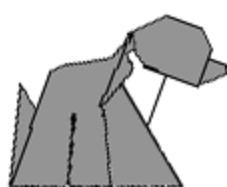

crimp fold for rear  
legs, reverse fold  
the nose and try to  
fold the ear

mountain fold  
to lock the  
model

round the body  
head and ears of  
the dog

That's all the model should be 3dimensional.
